

# A New Artsystems Web Manager v2

The industry's most powerful & elegantly efficient Web solution

- Self-administered
- Loads Artsystems data
- Updates in minutes
- Shows works in best light
- Complete and customizable
- 30 new features
- Great search engine results

See [artsystems.com/web](http://artsystems.com/web)

## How it works:

1 **Select** a work or dozens of works (or a whole exhibition!) from *GalleryPro* or *Studio*, then select 'File > Create DataKit'. The **DataKit** includes:

- **basic information** (searchable 'public' fields such as artist, title, date, size, medium, description, price, as well as 'category' and 'type')
- **images** (*Web Manager* makes three sizes from one attached image, including a print format)
- **artist bios, press releases, work infosheets**

2 **Open** *Web Manager*, and open the DataKit.

3 **Update** text and images for the **Home, News, Info, Artists, Exhibitions,** and **Search** pages via *Web Manager*.

4 **Send** and **Preview**, confirming all is correct.

5 Click '**Publish**'. *That's it!* The site is updated.

Includes options to sort works, display prices or not, mark work sold, etc.

**Customize!** Tailor our standard site to your specific needs with inexpensive customization such as **Private Viewing Rooms** or multiple image detail views (additional fees).
